**Reference Letter – ErreDue S.p.A.**

At Snam, we are pleased to provide this reference for ErreDue S.p.A., a supplier with whom we have maintained a constructive collaboration over the past two years.

Our relationship began in July 2023, when ErreDue was awarded a contract following a tender process for the supply of a hydrogen electrolyser. This collaboration led to the delivery and installation of an alkaline electrolyser in February 2024, as part of a pilot initiative carried out in partnership with a company operating in the steel sector.

Since the commissioning of the system, ErreDue has continued to deliver reliable and comprehensive support, including routine maintenance, remote monitoring, and logistics coordination. Their technical team has consistently demonstrated a high level of responsiveness, particularly during the commissioning phase and in addressing unexpected issues that arose during the pilot and demonstration tests conducted in 2024.

Under the terms of contract no. 5700002918 dated 14/07/2023, ErreDue is the designated supplier of a 0.5 MW nominal power electrolyser for hydrogen production. The system includes a demineralization unit and auxiliary components needed to produce H<sub>2</sub> at 30barg

We appreciate the professionalism and technical competence ErreDue has shown throughout our collaboration and consider them a reliable supplier of hydrogen generation technologies. Should you require further information, please do not hesitate to contact us
